

Water Heaters

Natural gas water heaters typically cost about **45 to 60 percent less** to operate than electric models. They heat water up to twice as fast and provide plenty of hot water. Most models even operate during power outages.

Experience the comfort and affordability
of natural gas water heaters.

- 1 Cost significantly less to operate than electric and propane models
- 2 Heat water up to twice as fast as electric models
- 3 Tankless models further cut expenses by only heating water when it's needed
- 4 Most models operate during power outages (all models if connected to a natural gas power generator)
- 5 Emit up to half the CO₂ greenhouse gases compared to electric models

Financing available upon approval.
Rates starting at 9.9%.
